PROFESSIONAL SUMMARY

Recent Computer Science graduate with strong Linux skills and Google IT Support Professional Certificate. Passionate about system administration and cybersecurity, with hands-on experience through personal projects, virtual labs, and security training. Seeking entry-level IT support or junior system administrator position to apply technical skills and grow professionally.

EDUCATION

Wuhan Institute of Technology

Bachelor of Engineering in Computer Science and Technology

Wuhan, China

Feb 2022 – Jan 2026

- Grade: 84% — Awards: First Class Scholarship for Academic Excellence (Ranked 1st in batch, 2025)
- Relevant Coursework: Operating Systems, Computer Networks, Database Systems, System Programming

TECHNICAL SKILLS

Operating Systems: Linux (advanced proficiency with 9+ years personal experience), Windows, Active Directory, Kali Linux

Linux Administration: User management, file systems, process management, package management, bash scripting, system hardening, log analysis

Virtualization & Cloud: QEMU/KVM, VirtualBox, VMware, Cloudflare Pages

Networking: TCP/IP, DNS, DHCP, NAT, Wireshark, Nmap, Network Troubleshooting

Security Tools: Wazuh, Sysmon, Zeek, Burp Suite, VirusTotal, SafeLine WAF

Log Analysis & Monitoring: Splunk (SPL), Elastic Stack (KQL), Log Analysis, System Monitoring

Programming & Scripting: Python, Bash, SQL, JavaScript

IT Support: Troubleshooting, Customer Support, Technical Documentation, Incident Response

TRAINING & CERTIFICATIONS

Google IT Support Professional Certificate | *Google / Coursera (Certificate)*

Nov 2025

- Completed comprehensive IT support training covering troubleshooting, customer service, networking, operating systems, system administration, and security.
- Gained hands-on experience with Linux command line, Windows system administration, network configuration, and IT automation.
- Developed skills in debugging, customer support best practices, and technical documentation.

Mastercard Cybersecurity Analyst Simulation | *Forage (Certificate)*

Jun 2026

- Analyzed user behavior data and identified security risks affecting organizational systems.
- Developed recommendations to improve system security and user awareness.
- Created documentation for security awareness and system improvements.

Google Cybersecurity Professional Certificate | *Google / Coursera (Certificate)*

Sep 2025

- Completed comprehensive cybersecurity training covering network security, threat intelligence, and risk management.
- Gained hands-on experience with security tools, incident response, and vulnerability assessment.
- Developed understanding of security frameworks, compliance, and best practices.

SOC Level 1 Certificate | *TryHackMe (Certificate)*

Mar 2026

- Completed hands-on SOC analyst training with real-world security scenarios.
- Gained practical experience with security monitoring, incident response, and threat detection.
- Developed skills in log analysis, security tools, and operational workflows.

LINUX SKILLS & EXPERIENCE

- 9+ years of personal Linux experience including system administration, command-line operations, shell scripting, and troubleshooting.
- Advanced proficiency in Linux file systems, user management, process management, package management, and system configuration.
- Proficient in Bash scripting for automation and system administration tasks.
- Experience with Linux security hardening, log analysis, and system monitoring.
- Hands-on experience with virtualization technologies (QEMU/KVM, VirtualBox) for testing and development environments.

TECHNICAL PROJECTS

- SafeLine WAF HomeLab** | *QEMU/KVM, SafeLine WAF, DVWA, Kali Linux* | GitHub

2026
- Designed and deployed an isolated virtual lab environment using QEMU/KVM with NAT networking.
 - Configured SafeLine WAF in reverse-proxy mode to protect web applications and system resources.
 - Performed system hardening, configured security policies, and conducted log analysis for system monitoring.
 - Documented complete system topology, setup procedures, and troubleshooting guides.
- Network Scanning Tools** | *Python, Shell* | GitHub

2025
- Developed network scanning and reconnaissance tools for system administration and security analysis.
 - Implemented automated network discovery and vulnerability scanning capabilities.
 - Created scripts for network troubleshooting and system monitoring tasks.
- PowerTrack CLI** | *Python, Shell* | GitHub

2026
- Built a command-line interface tool for system monitoring and power management.
 - Automated system administration tasks using Python and shell scripting.
 - Implemented efficient data processing and reporting capabilities for system metrics.
- Theme Automation** | *Shell Scripting* | GitHub

2026
- Created shell scripts for automated system configuration and theme management.
 - Developed automation tools to streamline system setup and customization processes.
 - Implemented bash scripting best practices for reliable system administration tasks.
